**DANGER**
Electrical Shock Hazard
Always disconnect power to case when servicing or cleaning.

**WARNING**
disconnect power to the fans before cleaning case.

**WARNING**
Some surfaces may be hot when case is in operation.

**WARNING**
Always turn off power to lights before servicing.

**CAUTION**
Do not walk or put heavy objects on top of case.
Welcome to the Hill PHOENIX display case family. We're very pleased you joined us.

This installation and operation handbook has been especially prepared for everyone involved with Hill PHOENIX display cases – owners, managers, installers and maintenance personnel.

You'll find this book different than our traditional manual. The most dramatic difference is the use of many more illustrated instructions to make it easier to read and to help you get the most from this innovative new design. When you follow the instructions you should expect remarkable performance, attractive fits and finish, and long case life.

We are interested in your suggestions for improvement both in case design and in this handbook. Please call/write to:

**HILL PHOENIX**  
Marketing Services Department  
1925 Ruffin Mill Rd.  
Colonial Heights, VA 23834  
Tel: 804-526-4455  
Fax: 804-526-7450  
or visit our web site at www.hillphoenix.com

We wish you the very best in outstanding food merchandising and a long trouble-free operation.
TABLE OF CONTENTS

GENERAL INFORMATION - PAGES 3-4
   First step recommendations and case dimensional drawings.

INSTALLATION - PAGE 5
   Instructions on how to trim out cases with illustrations.

REFRIGERATION COMPONENTS - PAGE 6
   Diagram showing the refrigeration components of the mobile self-contained cases.

COMPONENT DEFINITIONS - PAGE 7
   Operational descriptions of the refrigeration components.

PLUMBING - PAGE 8
   Information on drain connections

ELECTRICAL HOOKUP, WIRING DIAGRAMS, AND CONTROL SETTINGS - PAGES 9-25
   Complete information on electrical connections.

CASE OPERATION - PAGE 26
   Recommended settings for case controls.

DEFROST AND TEMPERATURE CONTROL - PAGE 27
   Defrost data and sensor bulb locations.

AIR FLOW AND PRODUCT LOADING - PAGE 28
   Air flow and load limits.

USE AND MAINTENANCE - PAGES 29-30
   Cleaning and fan information.

PARTS ORDERING - PAGES 31-33
   Replacement parts identification.

PRODUCT WARRANTY - Inside Back Cover
GENERAL INFORMATION

DESCRIPTION OF CASES: Specifically covered in this manual is model UPA-8’ mobile self-contained produce merchandiser.

STORE CONDITIONS: Hill Phoenix cases are designed to operate in an air conditioned store with a system that can maintain 75°F (24°C) store temperature and 55 percent (maximum) relative humidity (CRMA conditions). Case operation will be adversely affected by exposure to excessively high ambient temperatures and/or humidity.

REFRIGERATION SYSTEM OPERATION: Air cooled condensing units require ventilation for efficient performance of condensers. Machine room temperatures must be a minimum of 65°F in winter and a maximum of 95°F in summer. Minimum condensing temperatures should be no less than 70°F.

RECEIVING CASES: Examine fixtures carefully for shipping damage and shortages. For information on shortages contact the Service Parts Department at 1-800-283-1109.

APPARENT DAMAGE: A claim for obvious damage must be noted on the freight bill or express receipt and signed by the carriers agent, otherwise the carrier may refuse the claim.

CONCEALED DAMAGE: If damage is not apparent until after the equipment is unpacked, retain all packing materials and submit a written request to the carrier for inspection within 15 days of receipt of equipment.

LOST ITEMS: This equipment has been carefully inspected to insure the highest level of quality. Any claim for lost items must be made to Hill Phoenix within 48 hours of receipt of equipment.

TECHNICAL SUPPORT: If any technical questions arise regarding a refrigerated display case contact our Customer Service Department in Richmond at 1-804-526-4455. For any questions regarding our refrigeration systems or electrical distribution centers contact our Customer Service Department in Conyers at 1-770-285-3200.

CONTACTING FACTORY: Should you need to contact Hill Phoenix regarding a specific fixture, be sure to know the case model number and serial number. This information is on the serial plate located on the lower rear baffle of the case (see next page for details). Ask for a Service Parts Representative at 1-804-526-4455.
GENERAL INFORMATION

MODEL
UPA-8'

NOTES:
- CASE CLEARANCE: MINIMUM 6" FROM BOTH ENDS
- AVAILABLE SHELF SIZES: 10", 12", 14", & 16"
The cases come equipped with a 120 volt, three prong connection that can be plugged into any 30 amp NEMA L5-30 receptacle within the store. Do not locate the case next to an area of measurable air flow. Examples of these locations would be directly under an air vent or near a main entrance or exit. When setting cases be sure to allow at least six inches of space between the ends and nearest case or wall to provide sufficient airflow to the condenser.

The two front exterior panels are shipped attached to the case. The front panels are attached with three screws each located at the bottom of the panel. Once the screws are removed the panels lift off for easy access to electrical and plumbing components. The side panels, which are shipped loose in the case, fit behind the end and are attached with two screws.
Refrigeration components for the mobile self-contained cases are easily accessible in the tank and underneath the case. The expansion valve and suction line 1/4” access valve are both located in the right hand front side of the tank and are accessible without lifting the fan plenum. These components may be reached by lifting only the right hand deck pan which minimizes the need to remove product.

The diagram below illustrates all of the refrigeration components in the mobile self-contained cases. The components surrounded by the box are located within the case tank. Basic definitions of these components are listed on the following page.
COMPONENT DEFINITIONS

**Accumulator** - A device installed on the suction line that is used to boil off small amounts of liquid refrigerant so liquid does not reach the compressor.

**Access Valve** - Access port on the evaporator that allows service personnel to check system pressure.

**Compressor** - An electrically driven piston pump that pumps vapor refrigerant from a low pressure level to a higher pressure level.

**Condenser** - The component in a refrigeration system that transfers the heat that was absorbed by the refrigerant in the evaporator and the heat of compression from the system by condensing the refrigerant.

**Condenser Fan** - Fan that forces air through the air cooled condenser to aid heat transfer.

**Dual Pressure Control** - A device that protects the compressor from low charge and high pressure.

**Evaporator** - The component of the refrigeration system that absorbs heat from the air by boiling liquid refrigerant to vapor.

**Evaporator Fans** - Fans that circulate air through the case and force air through the evaporator to aid heat transfer.

**Filter Drier** - A device installed on the liquid line of a refrigeration system that removes water and other impurities from the refrigerant in the lines during initial start-up.

**Receiver** - The component in a refrigeration system that stores liquid refrigerant that is not being used by the system in low load conditions or when the system is shut down.

**Service Valve** - A manually operated valve in the refrigeration system that is used for various service operations such as isolating the high or low sides of the system.

**Thermostatic Expansion Valve (TXV)** - A valve that controls the flow of liquid refrigerant to the evaporator coil and also separates the high pressure side of the system from low pressure side of the system.

**Thermostatic Expansion Valve (TXV) Bulb** - A bulb that is attached to the suction line of the evaporator that controls the TXV. Inside the bulb is a charge that reacts to temperature and regulates the flow of refrigerant through the expansion valve.
The drain trap and case piping are attached to the case at the factory so no assembly is required. The standard drain assembly is designed to direct the case drainage to an evaporative drain pan located underneath the case. Drain pan heaters are wired to a float control switch that cuts the heaters on when the water level in the drain pan reaches a certain level.

The case drain is located front and center of the case for convenient access. Should any future maintenance issues arise it is important to note that the drain outlet is especially molded of ABS material and the drain box is constructed of PVC. Care should be given to make certain that all connections are water tight and sealed with appropriate PVC primer and PVC cement.
ELECTRICAL HOOKUP

The case comes pre-wired with a 120 volt, three prong connection that can be plugged into any 30 amp NEMA L5-30 receptacle, as shown in diagram 1 below.

The ON/OFF switch for the case lights is located on the left side of the case just under the rear sill as shown in diagram 2 below.

DANGER
Electrical Shock Hazard
Always disconnect power to case when servicing or cleaning.
**CONTROL SETTINGS**

### To program parameters:

1. Hold the “Enter” button down for about 10 seconds. The display will change to “Hy.”
2. Press the “Up” and “Down” button until the desired parameter is shown.
3. Press the “Enter” button. The parameter’s current value will be shown.
4. Press the “Up” and “Down” button until the desired value is shown.
5. Press the “Enter” button to save the new value. After 10 seconds of inactivity, the display will return to its normal function.

### To change setpoint:

1. Hold down the “Enter” button down for 3 seconds. The display will change to show the setpoint.
2. Press the “Up” or “Down” button until you reach the new setpoint.
3. Press the “Enter” button to save the new setpoint.

### To lock and unlock the unit:

Press the “Enter,” the “Up,” and the “Down” buttons in sequence and hold them all down until “- - -” is displayed. Hold for about 10 seconds until the current temperature is displayed.

### To Initiate a deep freeze cycle:

Press and the “Enter” and “Up” buttons in sequence and hold for five seconds. The compressor status LED will light.

### To Initiate Manual Defrost:

Hold the Defrost button down for 3 seconds.

### To Initiate Self-Test:

**IMPORTANT:** Disconnect loads before beginning self test. Cycle power to resume operation.

Press the “Up” and the “Down” buttons in sequence and hold for 5 seconds.
CONTROL SETTINGS

ESC3 Controls

Operation

Temperature Control
Temperature control in the ESC3 is accomplished by comparing the temperature reading of the case temperature probe against the temperature setpoint. The compressor output is used to control the temperature. If the temperature is above the temperature setpoint (L1) + the hysteresis setpoint (rd), the compressor output is turned on (subject to the conditions described in the compressor operation section). If the temperature is below the temperature setpoint – the hysteresis set-point, the compressor output is turned off. Note that the compressor output can also be used to control a refrigeration solenoid to regulate the temperature in a case.

Compressor Control
Several setpoints are available that allow the operation of the compressor output to be tailored to match individual needs.

Min On/Off Times and Minimum Cycle Time
Minimum ON/OFF compressor times can be specified, as well as a minimum time delay between compressor cycles. These parameters help prevent short-cycling.

Compressor Power ON Delay
The compressor power on delay set-point (c0) allows the user to specify a delay after the power up of the controller. The compressor output will not come on regardless of the temperature reading, until this amount of time has expired.

Compressor Safety Cycle
If the temp sensor fails, the ESC3 can be programmed to cycle the compressor ON for a fixed amount of time, followed by a 15-minute OFF time, until the probe failure is fixed. You may also specify the compressor be fully ON or OFF during probe failure.

Fan Control
The fan output is controlled by the ESC3 based on the current operating mode (defrost, cooling, etc.) and the setpoints which affect fan operation. It may be set to run only when required based on case temperature, or it may be set to be always ON regardless of temperature. In addition to these two basic modes, you may also turn the fans OFF during defrost, specify the fan will be ON only when the compressor is running, and delay fan activation after defrost drip time.

Defrost Control
The ESC3 can control the defrost function of a case. The ESC3 executes defrost cycles at a user-defined time interval. Electric, Off Cycle and Hot Gas defrost types are supported. The ESC3 features a number of options to customize operation and termination of a defrost cycle. A defrost cycle can be terminated based on time or temperature. When termination by temperature is used, a minimum and maximum defrost time can be specified.

You may also program the ESC3 to begin a defrost cycle after power-up (after a user-defined delay time) and initiate a defrost manually (see the description for “Defrost Key” on this page).

Alarm Control
The ESC3 has several alarm functions. In addition to alarms based on high and low air temperatures, it will alarm if a probe failure is detected. If you are using defrost, the ESC3 will also generate an alarm when the defrost cycle did not terminate as expected (such as when the ESC3 is programmed to terminate at a temperature set point and the set point was never reached).

Interface
The ESC3 features a 3 digit LED display that shows the case temperature. Alternately, the display can be configured to display the product temperature if a product temperature probe is connected. The temperature can be displayed in either °C or °F.

Three keys on the front panel provide an indication of operating status as well as allowing setpoints to be changed.

Alarm Key
The Alarm key illuminates when the controller has detected an alarm condition. This key is also used to reset an alarm condition and to enter the setup mode (allowing setpoints to be changed).

Compressor Key
The Compressor key illuminates when the compressor output is on. When the ESC3 is in setup mode, this key is used to select a setpoint to be modified and to change the value of the setpoint.

Defrost Key
The Defrost key illuminates when the ESC3 is in defrost mode. Press the defrost key for 5 seconds to go into manual defrost mode. The key is also used in setup mode to select a setpoint to be modified and to change the value of the setpoint.
Alarm Operation

Indications on the Display
If the defrost, or compressor key blinks, it means that the corresponding function is delayed by a timing routine or inhibited. Other two-character messages may appear on the screen to indicate changes of state or alarm conditions. Values shown in Table 1.

Viewing and Changing the Temperature Setpoint
The temperature setpoint is the comparison point for the control temperature input. To change the set point value:

1. Press the Alarm key for more than 5 seconds until the setpoint is displayed and blinking.
2. Press the Compressor key and Defrost keys to raise/lower the value.
3. Press the Alarm key again to accept the new value.

Changing Other Setpoints
There are two levels of setpoints in the ESC3. The first level does not require a password to change (unless the buttons are locked out). The setpoints that can be changed in this manner are identified in the table on the next page as a USER LEVEL setpoint. All other setpoints do require a password to change and are identified as OEM setpoints. To change USER-level setpoints:

1. Press the Alarm key and hold it until the letters PS are displayed.
2. Use the Compressor and Defrost key to scroll through the codes for the different set points (see Table 1 and Table 2).
3. When the code is displayed for the setpoint you wish to change, press the Alarm key. The value for that setpoint will be displayed.
4. Press the Compressor or Defrost key to change the value
5. Press the Alarm key to go back to the code.

At this point you must press the Alarm key to accept the change or press the Compressor or Defrost key to scroll to the next USER setpoint. To accept the changes, press and hold the Alarm key until the display stops flashing. To change OEM-level setpoints, the password must be entered. To do this press and hold the Alarm key until the letters PS are displayed. When PS is displayed release the alarm key and 0 will be displayed. Press the Compressor or Defrost keys to enter the password (22 is the default) then press the Alarm key. PS will be displayed again. At this point, pressing the Compressor or Defrost key will scroll through the legend for all setpoints. To change the setpoints, use the identical procedure that is used to change a USER setpoint.

1. GENERAL WARNING

1.1 PLEASE READ BEFORE USING THIS MANUAL

- This manual is part of the product and should be kept near the instrument for easy and quick reference.
- The instrument shall not be used for purposes different from those described herein. It cannot be used as a safety device.

1.2 SAFETY PRECAUTIONS

- Check the supply voltage is correct before connecting the instrument.
- Do not expose to water or moisture. Use the controller only within the operating limits avoiding sudden temperature changes with high atmospheric humidity to prevent formation of condensation.
- Warning: disconnect all electrical connections before any kind of maintenance.
- The instrument must not be opened.
- Fill the probe where it is not accessible by the end user.
- In case of failure or faulty operation send the instrument back to the distributor or to "Dixell S.p.A." (see address) with a detailed description of the fault.
- Consider the maximum current which can be applied to the device (see Technical Data).
- Ensure that the wires for probes, loads and the power supply are separated and far enough from each other, without crossing or intertwining.
- In case of applications in industrial environments, the use of mains filters (our model FT1) in parallel with inductive loads could be useful.

2. GENERAL DESCRIPTION

Model XR20C, format 32 x 4 mm, is a thermostat with off cycle defrost designed for refrigeration applications at normal temperature. It provides a relay output to drive the compressor and a NTC probe input. A internal timer manages the off cycle defrost. The instrument is fully configurable through special parameters that can be easily programmed through the keyboard.

3. CONTROLLING LOADS

3.1 COMPRRESSOR

The regulation is performed according to the temperature measured by the thermostat probe with a positive differential from the set point. If the temperature increases and reaches set point plus differential the compressor is started and then turned off when the temperature reaches the set point value again. In case of fault in the thermostat probe the start and stop of the compressor are timed through parameters "CDn" and "COF".

3.2 DEFROST

Defrost is performed through a simple stop of the compressor. Parameter "M" controls the intervals between defrost cycles, while its length is controlled by parameter "M/F & D/E". M/F is used for a timed defrost and when P2P = n. When P2P = y, then D/E will end defrost by temperature.

4. FRONT PANEL COMMANDS

SET: To display target set point; in programming mode it selects a parameter or confirms an operation.

(DOT) To start a manual defrost

(UP) To see the max. stored temperature, in programming mode it displays the parameter codes or increases the displayed value.

(DOWN) To see the min. stored temperature, in programming mode it displays the parameter codes or decreases the displayed value.

KEY COMBINATIONS:
- + - To lock & unlock the keyboard.
- SET: To enter the programming mode.
- SET: To return to the room temperature display.

4.1 MEANING OF LEDs

Each LED function is described in the following table.

5. MAIN FUNCTIONS

5.1 HOW TO SEE THE SETPOINT

SET: 1. Press and immediately release the SET key. The display will show the Setpoint value.

2. Push and immediately release the SET key or wait for 5 seconds to display the probe value again.

5.2 HOW TO CHANGE THE SETPOINT

1. Push the SET key for more than 3 seconds to change the Set point value.

2. The value of the setpoint will be displayed and the LED starts blinking.

3. To change the Set value push the + or - arrows.

4. To return the new set point value press the SET key again or wait 15s.

5.3 HOW TO START A MANUAL DEFROST

1. Push the DEF key for more than 2 seconds and a manual defrost will start.

5.4 HOW TO CHANGE A PARAMETER VALUE

1. Enter the Programming mode by pressing the Set and or key for 3s (D/E & start blinking).

2. Select the required parameter.

3. Press the "SET" key to display its value. (Now only the LED is blinking).

4. Use or - to change its value.

5. Set "SET" to store the new value and move to the following parameter.

5.5 THE HIDDEN MENU

The hidden menu includes all the parameters of the instrument.

5.5.1 HOW TO ENTER THE HIDDEN MENU

Enter the Programming mode by pressing the Set + key for 3s (D/E & start blinking).

1. When a parameter is displayed keep pressing the Set + or for more than 7s. The 72y label will be displayed. Release the keys, immediately the HY parameter will be shown. NOW YOU ARE IN THE HIDDEN MENU.

2. Select the required parameter.

3. Press the "SET" key to display its value (Now only the LED is blinking).

4. Use or - to change its value.

5. Press "SET" to store the new value and move to the following parameter.

To exit: Press Set + or - wait 15s without pressing a key. NOTE: the set value is stored even when the procedure is exited by waiting the time-out to expire.

5.5.2 HOW TO MOVE A PARAMETER FROM THE HIDDEN MENU TO THE FIRST LEVEL.

Each parameter present in the HIDDEN MENU can be moved or put into "THE FIRST LEVEL" (user level) by pressing "SET = y" in the HIDDEN MENU when a parameter is present in the First Level the decimal point is on.

5.6 HOW TO LOCK THE KEYBOARD

Press trapped together for more than 3s the + and - keys in the Pn menu will be displayed.

5.7.1 HOW TO UNLOCK THE KEYBOARD

In the Pn menu press the + and - keys together.

LIST OF PARAMETERS

1. SETPOINT: the parameters preceded by dots are only in the Hidden Menu.

2. DIFFERENTIAL: (0.1 - 25°C / 1 - 355 °F) the differential for set point. Compressor Cut In is Set Point Plus Differential (HP). Compressor Cut Out is when the temperature reaches the set point.

3. MINIMUM SET: Set Point (75°C / 167°F). Set the minimum acceptable value for the set point.

4. MAXIMUM SET: Set Point (75°C / 167°F). Set the maximum acceptable value for the set point.

5. REMAINING PROBE CALIBRATION: (1.00 - 13.0°C). The remaining probes calibration of the thermostat probes.

6. EVAPORATOR PROBE: Present or not. Display the defrost status by time, year present: the defrost status by temperature.

7. ON/OFF OUTPUT: (1.0 - 12.0°C / 150 - 250°F). Allows the adjustment of positive offset of the evaporator probe.

8. ON/OFF OUTPUT ACTIVATION DELAY: (0.5 - 99.9s). This function is enabled at the initial start up of the instrument and inhibits any output activation for the period of time set in the parameter.

9. ANTI-CYCLE DELAY: (0.01 - 60 min). The minimum interval between the compressor stop and the next start up.

10. COMPRRESSOR ON TIME: (0.01 - 255 min). Time during which the compressor is active in case...

Defrost is performed through a simple stop of the compressor. Parameter “idifferential” allows the compressor to be started and increases and reaches the set point plus thermostat probe with a positive differential.

**THE REGULATION OUTPUT**

The regulation is performed according to the temperature measured by the thermostat probe with a positive differential from the set point: if the temperature increases and reaches set point plus differential the compressor is started and then turned off when the temperature reaches the set point value again.

In case of fault in the thermostat probe the start and stop of the compressor are timed through parameters “O” and “Cn”.

### 5. DEFROST

Defrost is performed through a simple stop of the compressor. Parameter “id” controls the interval between defrost cycles, while its length is controlled by parameter “Mo”.

### 7. PARAMETERS

**REGULATION**

- **My** Differential: (0,1°C + 25°C) intervention differential for set point. Compressor Cut In is SET POINT + differential (H). Compressor Cut Out is the temperature reaches the set point.
- **LS** Minimum SET POINT: (–55°C/SET–58°F/SET): Sets the minimum value for the set point.
- **US** Maximum SET POINT: (SET+99°C/SET+99°F): Set the maximum value for set point.
- **P1** First probe calibration: (–6÷9,9°C) allows to adjust possible offset of the first probe.
- **P2** Evaporator probe presence: 0= not present; 1= the defrost stops by temperature.
- **E** Second probe calibration: (–9,9÷9,9°C) allows to adjust possible offset of the second probe.
- **Cd** Outputs activation delay at start up: (5÷90s) This function is enabled at the start up of the instrument and inhibits any output activation for the period of time set in the parameter.
- **Ac** Anti-short cycle delay: (0÷50 min) minimum interval between the compressor stop and the following restart.
- **Cm** Compressor OFF time with faulty probe: (0÷99 min) time during which the compressor is active in case of faulty thermostat probe. With C=0 compressor is always OFF.
- **Cn** Compressor OFF time with faulty probe: (0÷99 min) time during which the compressor is OFF in case of faulty thermostat probe. With C=0 compressor is always active.

**DISPLAY**

- **CF** Measurement unit: (“°F” “°C” °Celsius; “F” “Fahrenheit”). WARNING: When the measurement unit is changed the SET point and the values of the parameters Hx, LS, US, e, c, OFF, AL have to be checked and modified if necessary.
- **E** Resolution (only for “°C”): (0,01°C) “°F” resolution integer; 1m “°F” resolution integer;
- **D** Display delay: (0÷15 sec) When the temperature increases, the display is updated at intervals of 1 °C/1°F after this time.
- **dE** Defrost termination temperature: (0÷50°C) if d=1 it sets the temperature measured by the evaporator probe, which causes the end of defrost.
- **id** Interval between defrost cycles: (0÷99 min) Determines the time interval between the beginning of two defrost cycles.
Dixell Controls  - Dixell XR02CX

**ALARMS**

**AU** Maximum temperature alarm: (AL+99°C) when this temperature is reached the alarm is enabled, after the "Ad" delay time.

**AL** Minimum temperature alarm: (55÷AU°C) when this temperature is reached the alarm is enabled, after the "Ad" delay time.

**Ad** Temperature alarm delay: (0÷99 min) time interval between the detection of an alarm condition and alarm signalling.

**dA** Exclusion of temperature alarm at startup: (0÷99 min) time interval between the detection of a temperature alarm condition after instrument power on and alarm signalling.

**d2** Evaporator probe display (read only)

**Pt** Parameter code table

**lL** Software release

**T** 

**8. INSTALLATION AND MOUNTING**

Instrument XR02CX shall be mounted on a vertical panel, in a 29x71 mm hole, and fixed using the special bracket supplied.

The temperature range allowed for correct operation is 0÷60°C. Avoid places subject to strong vibrations, corrosive gases, excessive dirt or humidity. The same recommendations apply to the temperature range for correct operation.

**9. ELECTRICAL CONNECTIONS**

The instrument is provided with screw terminal block to connect cables with a cross section up to 2.5 mm². Before connecting cables make sure the power supply complies with the instrument’s requirements. Separate the probe cables from the power supply cables, from the outputs and the power connections. Do not exceed the maximum current allowed on each relay, in case of heavier loads use a suitable external relay.

**9.1 PROBES**

The probes shall be mounted with the bulb upwards to prevent damages due to casual liquid infiltration. It is recommended to place the thermostat probe away from air streams to correctly measure the average room temperature. Place the defrost termination probe among the evaporator fins in the coldest place, where most of the ice is formed, far from heaters or from the warmest place during defrost, to prevent premature defrost termination.

**10. HOW TO USE THE HOT KEY**

**10.1 HOW TO PROGRAM THE HOT KEY FROM THE INSTRUMENT (UPLOAD)**

1. Program one controller with the front keypad.
2. When the controller on, insert the “Hot Key” and push “SET” key; the “Md” message appears followed a by flashing “En”.
3. Push “SET” key and the “Er” will be displayed.
4. Turn OFF the instrument remove the “Hot Key”, then turn it ON again.

**NOTE:** the “Er” message is displayed for failed programming. In this case push again a key if you want to restart the upload again or remove the “Hot Key” to abort the operation.

**10.2 HOW TO PROGRAM AN INSTRUMENT USING HOT KEY (DOWNLOAD)**

1. Turn OFF the instrument.
2. Insert a programmed “Hot Key” into the 5 PIN receptacle and then turn the Controller ON.
3. Automatically the parameter list of the “Hot Key” is downloaded into the Controller memory, the “dE” message is blinking followed by a flashing “En”.
4. After 10 seconds the instrument will restart working with the new parameters.
5. Remove the “Hot Key”.

**NOTE:** the “Er” message is displayed for failed programming. In this case push again a key if you want to restart the upload again or remove the “Hot Key” to abort the operation.

**11. ALARM SIGNALLING**

<table>
<thead>
<tr>
<th>Mess.</th>
<th>Cause</th>
<th>Outputs</th>
</tr>

</tr>
</tbody>
</table>

**11.1 ALARM RECOVERY**

Probe alarms “P1” and “P2” start some seconds after the fault in the related probe, they automatically stop some seconds after the probe restores normal operation. Check connections before replacing the probe. Temperature alarms “HA” and “LA” automatically stop as soon as the temperature returns to normal values.

**12. TECHNICAL DATA**

**Housing:** self extinguishing ABS.

**Case:** frontal 32x74 mm; depth 63mm.

**Mounting:** panel mounting in a 7x12mm panel cutout

**Protection:** IP00.

**Connections:** Screw terminal block ≤ 2.5 mm² wiring.

**Power supply:** according to the model ±10%, 230Vac ±10%, 50/60Hz; 110Vac ±10%, 50/60Hz

**Power absorption:** 3VA max

Display: 2 digits, red LED, 14.2 mm high; Inputs: 2 NTC.

Relay outputs: compressor SPST 8(3) A, 250Vac; 20(8) A, 250Vac

Data storing: on the non-volatile memory (EEPROM).

**Kind of action:** 1B. Pollution grade: 2; Software class: A;

**Rated impulsive voltage:** 250V; Overvoltage Category: II

**Operating temperature:** 0÷60 °C; Storage temperature: -30÷85 °C

Relative humidity: 85% (no condensing)

Measuring and regulation range: NTC -40÷+105°C (-40÷+230°F)

Resolution: 0.1 °C or 1 °F (selectable) Accuracy ambient temp. 25°C ±0.7 °C ±1 digit

2. GENERAL WARNINGS

PLEASE READ BEFORE USING THIS MANUAL

1. This manual is part of the product and should be kept near the instrument for easy and quick reference.
2. The instrument shall not be used for purposes different from those described hereunder. It cannot be used as a safety device.
3. Check the application limits before proceeding.

SAFETY PRECAUTIONS

- Check the supply voltage is correct before connecting the instrument.
- Do not expose to water or moisture, use the controller only within the operating limits avoiding sudden temperature changes with high atmospheric humidity to prevent formation of condensation
- Warning: disconnect all electrical connections before any kind of maintenance.
- Fill the probe where it is not accessible by End User. The instrument must not be opened.
- In case of failure or faulty operation send the instrument back to the distributor or to “Dixell S.p.A.” (see address) with a detailed description of the fault.
- Consider the maximum current which can be applied to each relay (see Technical Data).
- In case of applications in industrial environments, the use of mains filters (our mod. FT1) in parallel with inductive loads could be useful.
- Fit the probe where it is not accessible by the End User. The instrument must not be opened.
- Warning: disconnect all electrical connections before any kind of maintenance.

3. GENERAL DESCRIPTION

The XR03CX, in 32x4x35mm short format, is microprocessor based controller suitable for applications on normal or low temperature refrigerating units. It provides two relay output: one for compressor and the other one for alarm signaling or as auxiliary output. It provides an NTC probe input and a digital input for alarm signaling, for switching the auxiliary output or for start defrost. The instrument is fully configurable through special parameters that can be easily programmed through the keyboard or by the HOTKEY.

The XR04CX, in 32x4x35mm short format, is microprocessor based controller suitable for applications on normal or low temperature refrigerating units. It provides two relay output: one for compressor and the other one for alarm signaling or as auxiliary output. It provides an NTC probe input and a digital input for alarm signaling, for switching the auxiliary output or for start defrost. The instrument is fully configurable through special parameters that can be easily programmed through the keyboard or by the HOTKEY.

4. REGULATION

The regulation is performed according to the temperature measured by the thermostat probe with a positive differential from the set point: if the temperature increases and reaches set point plus differential the compressor is started and then turned off when the temperature reaches the set point value again.

In case of fault in the thermostat probe the start and stop of the compressor are timed through the differential from the set point: if the temperature measured by the thermostat probe with a positive differential from the set point, the compressor is started and then turned off when the temperature increases and reaches set point value again.

5. DEFROST

XR03CX

Defrost is performed through a simple stop of the compressor. Parameter "id" controls the interval between defrost cycles, while its length is controlled by parameter "Md".

XR04CX

Two defrost modes are available through the "td" parameter:
- "td=EL" → defrost through electrical heater (compressor OFF)
- "td=H" → hot gas defrost (compressor ON)

Other parameters are used to control the interval between defrost cycles (id), its maximum length (Md) and two defrost modes: timed or controlled by the evaporator’s probe. At the end of defrost dripping time is started, its length is set in the dt parameter. With dt=0 the dripping time is disabled.

6. FRONT PANEL COMMANDS

To display target set point, in programming mode it selects a parameter or confirms an operation

To start a manual defrost

In programming mode it browses the parameter codes or increases the displayed value

In programming mode it browses the parameter codes or decreases the displayed value

KEYS COMBINATION

To lock or unlock the keyboard

To enter in programming mode

To return to room temperature display

HOW TO SEE THE SET POINT

1. Push and immediately release the SET key, the set point will be showed;
2. Push and immediately release the SET key or wait about 5s to return to normal visualisation.

HOW TO CHANGE THE SETPOINT

1. Push the SET key for more than 2 seconds to change the Set point value;
2. The value of the set point will be displayed and the “°C” or “°F” LED starts blinking;
3. To change the Set value push the + or – arrows within 10s;
4. To memorize the new set point value push the SET key again or wait 10s.

HOW TO START A MANUAL DEFROST

Push the DEF key for more than 2 seconds and a manual defrost will start

HOW TO CHANGE A PARAMETER VALUE

To change the parameter’s value operate as follows:
1. Enter the Programming mode by pressing the SET+ + keys for 3s ("°C" or "°F" LED starts blinking);
2. Select the required parameter. Press the "SET" key to display its value
3. Use + or – to change its value
4. Press "SET" to store the new value and move to the following parameter.

To exit: Press SET+ + or wait 15s without pressing a key.

NOTE: The set value is stored even when the procedure is exited by waiting the time-out to expire.

HIDDEN MENU

The hidden menu includes all the parameters of the instrument.

HOW TO ENTER THE HIDDEN MENU

1. Enter the Programming mode by pressing the SET+ + keys for 3s ("°C" or "°F" LED starts blinking);
2. Released the keys, then push again the SET+ + keys for more than 7s.
3. The L2 label will be displayed immediately followed by the Hy parameter. NOW YOU ARE IN THE HIDDEN MENU.
4. Select the required parameter.
5. Press the "SET" key to display its value
6. Use + or – to change its value
7. Press "SET" to store the new value and move to the following parameter.

To exit: Press SET+ + or wait 15s without pressing a key.

NOTE1: If none parameter is present in L1, after 3s the "P" message is displayed. Keep the keys pushed till the L2 message is displayed.

NOTE2: If the set value is stored even when the procedure is exited by waiting the time-out to expire.

HOW TO MOVE A PARAMETER FROM THE HIDDEN MENU TO THE FIRST LEVEL AND VICEVERSA.

Each parameter present in the HIDDEN MENU can be removed or put into “THE FIRST LEVEL” (user level) by pressing SET+ +.

NOTE: In HIDDEN MENU when a parameter is present in First Level the decimal point is on.

TO LOCK THE KEYBOARD

- Keep pressed for more than 3s the + and – keys.
- The “OF” message will be displayed and the keyboard will be locked. If a key is pressed more than 3s the “OF” message will be displayed.

TO UNLOCK THE KEYBOARD

Keep pressed together for more than 3s the + and – keys till the “on” message will be displayed.

7. PARAMETERS

REGULATION
HY Differential: (0.1°C = 0.1°F) Intervention differential for set point. Compressor Cut IN is SET POINT + differential (Hy). Compressor Cut OUT is when the temperature reaches the set point.
LS Minimum SET POINT: (65°C=149°F+SET); Sets the minimum value for the set point.
US Maximum SET POINT: (99°C=208°F-SET); Set the maximum value for set point.
Pr First probe calibration: (0-99°C) allows to adjust possible offset of the first probe.
P2 Evaporator probe presence: n= not present; y= the defrost stops by temperature. (Only XR04CX)
Se Second probe calibration: (0-99°C) allows to adjust possible offset of the second probe. (Only XR04CX)
do Outputs activation delay at start up: (0-99m) This function is enabled at the initial start up of the instrument and inhibits any output activation for the period of time set in the parameter.
Ac Anti-short cycle delay: (0-50m) minimum interval between the compressor stop and the following restart.
Cc Compressor OFF time with faulty probe: (0-30m) time during which the compressor is OFF in case of faulty thermostat probe. With Cc=0 compressor is always active.
Cc Compressor OFF time with faulty probe: (0-99m) time during which the compressor is OFF in case of faulty thermostat probe. With Cc=0 compressor is always active.
Ch Kind of Action (Only XR03CX): cL DEFROST
DEFROST

DIGITAL INPUT (Only XR03CX)

1592020130 XR03_04CX GB 16.01.07.doc

The free voltage digital input is programmable in different configurations by the "oP " delay time.

A. Maximum temperature alarm temperature (AL=99°C) when this temperature is reached the alarm is activated, after the "CA" delay time.
AL Minimum temperature alarm temperature (AL=55-44°C) when this temperature is reached the alarm is activated, after the "CA" delay time.
Ad Temperature alarm delay: (0-99m) time interval between the detection of an alarm condition and alarming signal.
Ex. Exclusion of temperature alarm at startup: (0-99m) time interval between the detection of the temperature alarm condition after instrument power on and alarming signal.
b. Silenceing buzzer (n= not present; y= enabled): When the buzzer is enabled, all alarms stop some seconds after the probe restarts normal operation. Check connections before replacing the probe.
AP Alarm relay polarity (OL=OFF): (Only XR03CX) CL= active when closed; OP= active when open.

Digital Input: Only XR03CX

IP Digital input polarity: (P= CL) or P= activated by closing the contact; CL= activated by opening the contact;
If Digital input configuration: (Ea=FanOff/Ea=A/C) Ea= external alarm: "Ea" message is displayed, bA= serious alarm "bA" message is displayed; dr= door switch function; f= defrost activation; Au= used most; H= inversion of the kind of action.
Id Digital input (disactivated) with f=EA or br=delay between the detection of the external alarm condition and its signalling . With f=0 it represents the delay to activate the door alarm open.
Cc Compressor and fan status when open door: (n=Off/F=On) normal; F= Fans OFF; P= Compressor OFF; C= Compressor and fans OFF.
rd Regulation with door open: (n= not regulation if door is open; y= when dis is elapsed if door open alarm is present.

OTHER

1. Thermostat probe display (read only)
2. Evaporator probe display (read only) (Only XR03CX)
P. Parameter code table
r. Software release

8. DIGITAL INPUTS

The free voltage digital input is programmable in different configurations by the "oP " parameter.

Door Switch (IP1b0)

It signals the door status and the corresponding relay output status through the "oP" parameter: no=normal (any change); F= Fan OFF; P= Compressor OFF; FC= Fans and Compressors OFF.

Since the door is opened, after the delay time set through parameter "dr", the door alarm is enabled, the display shows the message "bA" and the regulation restarts if rd= y. The alarm stops as soon as the external digital input is disabled. With the door open, the high and low temperature alarms are disabled.

Ex.Dternal Alarm (If=EA)

As soon as the digital input is activated the unit will wait for "dt" time delay before signalling the "EA" alarm message. The output status don't change. The alarm stops just after the digital input is deactivated.

Serious Alarm (If=cb)

When the digital input is activated, the unit will wait for "dt" delay before signalling the "CA" alarm message. The relay outputs are switched OFF. The alarm will stop as soon as the digital input is deactivated.

Switching Second Relay On (If=ca)

When o=ca it switches on and off the second relay.

Start Defrost (If=Fd)

It starts a defrost if there are the right conditions. After the defrost is finished, the normal regulation will restart only if the digital input is disabled otherwise the instrument will wait until the "dd" safety time is expected.

Inversion of the Kind of Action: Heating - Cooling (If=nh)

This function allows to invert the regulation of the controller: from cooling to heating and viceversa.

9. INSTALLATION AND MOUNTING

The instrument is provided with screw terminal block to connect cables with a cross section up to 2.5 mm². Before connecting cables make sure the power supply complies with the instrument's requirements. Separate the probe cables from the power supply cables, from the outputs and the power connections. Do not exceed the maximum current allowed on each relay, in case of heavier loads use a suitable external relay.

1. PROBES

The probes shall be mounted with the bulb upwards to prevent damages due to casual liquid infiltration. It is recommended to place the thermostat probe away from air streams to correctly measure the average room temperature. Place the defrost termination probe among the evaporator fins, in the coldest place, where most ice is formed, far from heaters or from the warmest place during defrost, to prevent premature defrost termination.

11. HOW TO USE THE HOT KEY

1.2 HOW TO PROGRAM THE HOT KEY FROM THE INSTRUMENT (UPLOAD)

1. Program one controller with the front keypad.
2. When the controller is ON, insert the "Hot key" and push [key]; the "u" message appears followed by a flashing "Ed".
3. Push "SET key" and the "Ed" will stop flashing.
4. Hot OFF the instrument remove the "Hot key" and turn it ON again.

NOTE: The "Ed" message is displayed for failed programming. In this case push again [key] if you want to restart the upload again or remove the "Hot key" to abort the operation.

1.3 HOW TO PROGRAM AN INSTRUMENT USING HOT KEY (DOWNLOAD)

1. Turn OFF the instrument.
2. Insert a programed "Hot key" into the 5 PIN receptacle and then turn the Controller ON.
3. Automatically the parameter list of the "Hot key" is downloaded into the controller memory, the "dd" message is blinking followed by a flashing "Ed".
4. After 10 seconds the instrument will restart working with the new parameters.
5. Remove the "Hot key".

NOTE: The "Ed" message is displayed for failed programming. In this case push again [key] if you want to restart the upload again or remove the "Hot key" to abort the operation.

12. ALARM SIGNALING

The probe alarms and "dA" Door Open Compressor and fans restarts

1.4 Alarm Recovery

Probe alarms "P1" and "P2" start some seconds after the fault in the related probe; they automatically stop some seconds after the probe restarts normal operation. Check connections before replacing the probe. Temperature alarms "HA" and "LA" automatically stop as soon as the temperature returns to normal values.

Alarms "EA" and "CA" (with If=cb) recover as soon as the digital input is disabled.

13. TECHNICAL DATA

Housing: self extinguishing ABS.
Case: frontal 32x74 mm; depth 60mm
Mounting: panel mounting in a 71x29mm panel cut-out
Protection: IP65; Frontal protection: IP4X
Connections: Screw terminal block ≤ 2,5mm² wiring.
Dixell Controls - Dixell XR04CX

Power supply: according to the model: 12Vac/dc ±10%; 24Vac/dc ±10%; 230Vac ±10%, 50/60Hz, 110Vac ±10%, 50/60Hz
Power absorption: 3VA max
Display: 2 digits, red LED, 14.2 mm high; Inputs: Up to 2 NTC or PTC probes.
Digital input: free voltage contact
Relay outputs: compressor SPST (8)(3) A, 250Vac or 20(8)A - 250Vac
defrost or Aux: SPDT (8)(3) A, 250Vac
Data storing: on the non-volatile memory (EEPROM).
Kind of action: 1B; Pollution grade: 2; Software class: A;
Rated impulsive voltage: 2500V;
Overvoltage Category: II
Operating temperature: 0÷60 °C;
Storage temperature: -30÷85 °C.
Relative humidity: 20 ÷ 85% (no condensing)
Measuring and regulation range: NTC probe: -40÷110°C (-40÷230°F);
Resolution: 0.1 °C or 1 °C or 1 °F (selectable); Accuracy (ambient temp. 25°C): ±0.7 °C ±1 digit

14. CONNECTIONS

XR03CX –20A o 8A Compressor

NOTE: The compressor relay is 20(8)A or 16(6)A depending on the model.

XR04CX –20A o 8A Compressor

NOTE: The compressor relay is 20(8)A or 16(8)A depending on the model.

DEFROST AND TEMP CONTROL

The mobile self-contained cases come equipped with Timed-Off defrost. The timed-off defrost termination probe and the temperature control probe are located on the rear wall of the case behind the access cover in the rear baffle, as shown below.

Both of these probes are wired to the case controller that is located in the front of the case behind the front panels as shown in diagram 2 below.
AIR FLOW AND PRODUCT LOADING

Cases have been designed to provide maximum product capacity within the refrigerated air envelope. It is important that you do not overload the food product display so that it impinges on the air flow pattern.

Overloading will cause malfunction and the loss of proper temperature levels, particularly when discharge and return air sections are covered. Please keep products within the load limit lines shown on the diagram.

DISCHARGE ............. 1
LOAD LIMIT .............. 2
AIR FLOW ............... 3
RETURN AIR ............. 4
USE AND MAINTENANCE

CASE CLEANING

Case is designed to facilitate cleaning. All surfaces pitch to a deep-drawn drain trough that angles toward the front and center of the case where the 2” waste outlet is located for easy access.

In order to keep the unit running at peak design efficiency the air intake grill and the condenser coil should be cleaned at least once a month.

The coil is covered to keep food fluids from entering. The cover is screwed down to the coil but is easily removed when coil cleaning is desired. The fan plenum lifts up for cleaning, exposing a major portion of the inside bottom. Make certain coil cover and plenum are in their original positions after cleaning to avoid air leaks.

CLEANING PROCEDURES

- A periodic cleaning schedule should be established to maintain proper sanitation, insure maximum operating efficiency, and avoid the corrosive action of food fluids on metal parts that are left on for long periods of time. We recommend cleaning once a week.

- To avoid shock hazard, be sure all electrical power is turned off before cleaning. In some installations, more than one disconnect switch may have to be turned off to completely de-energize the case.

- Check waste outlet to insure it is not clogged before starting the cleaning and avoid introducing water faster than drip pipe can carry it away.

- Avoid spraying cleaning solutions directly on fans or electrical connections.

- Allow cases to be turned off long enough to clear any frost or ice from coil and flue areas.

- Remove and clean honeycomb discharge grill. You may need to use spray detergent and a soft, long bristle brush.

- Use mild detergent and warm water. When necessary, water and baking soda solution will help remove case odors. Avoid abrasive scouring powders or pads.

- For difficult stains that may appear on polymer exterior bumper parts, the following specialty cleaning products are recommended:

  3M brand® Stainless Steel Cleaner and Polish
  3M brand® Troubleshooter Cleaner
  3M brand® Sharpshooter, Extra Strength No Rinse Cleaner
  3M brand® Scotch-Brite No. 64 Cleaning and No. 74 Scrubbing Brushes
  Revere® aluminum powder for tank liner
  Armor All® for polymer parts

DANGER
Electrical Shock Hazard
Always disconnect power to case when servicing or cleaning.
FANS

The evaporator fans are equipped with 5 watt fan motors, 1550 RPM’s, 6” diameter, clockwise rotation. The rotation of these fans is determined relative to the back side of the motor. It is important that the blade pitch be maintained as specified. Do not attempt a field modification by altering the blades.

Fan motors may be changed with an easy three-step process without lifting up the plenum, thereby avoiding the necessity to unload the entire product display to make a change:

1. Disconnect power to the case.

2. Unplug the fan motor, easily accessible outside the plenum.

3. Remove two fasteners, then lift out the entire fan basket.

WARNING
Disconnect power to the fans before cleaning or servicing case.

PARTS ORDERING

Procedure

1. Contact the Service Parts Department

   Hill PHOENIX
   1925 Ruffin Mill Road
   Colonial Heights, Virginia 23834
   Tel: 800-283-1109
   Fax: 804-526-3897

2. Provide the following information about the part you are ordering:

   • Model number and serial number* of the case which the part is needed for.
   • Length of part, if applicable.
   • Color of part if painted, or color of polymer part.
   • Whether part is for left hand or right hand application.
   • Whether shelves are with or without lights.
   • Quantity.

   *Serial plate is located on the back of the case on the left hand side.

3. If parts are to be returned for credit, ask the Parts Department to furnish you with a Return Materials Authorization Number.
WARRANTY
HEREINAFTER REFERRED TO AS MANUFACTURER

FOURTEEN MONTH WARRANTY. MANUFACTURER’S PRODUCT IS WARRANTED TO BE FREE FROM DEFECTS IN MATERIAL AND WORKMANSHIP UNDER NORMAL USE AND MAINTENANCE FOR A PERIOD OF FOURTEEN MONTHS FROM THE DATE OF ORIGINAL SHIPMENT. A NEW OR REBUILT PART TO REPLACE ANY DEFECTIVE PART WILL BE PROVIDED WITHOUT CHARGE, PROVIDED THE DEFECTIVE PART IS RETURNED TO MANUFACTURER. THE REPLACEMENT PART ASSUMES THE UNUSED PORTION OF THE WARRANTY.

This warranty does not include labor or other costs incurred for repairing, removing, installing, shipping, servicing, or handling of either defective parts or replacement parts.

The fourteen month warranty shall not apply:

1. To any unit or any part thereof which has been subject to accident, alteration, negligence, misuse or abuse, operation on improper voltage, or which has not been operated in accordance with the manufacturer’s recommendation, or if the serial number of the unit has been altered, defaced, or removed.

2. When the unit, or any part thereof, is damaged by fire, flood, or other act of God.

3. Outside the continental United States.

4. To labor cost for replacement of parts, or for freight, shipping expenses, sales tax or upgrading.

5. When the operation is impaired due to improper installation.

6. When installation and startup forms are not properly complete or returned within two weeks after startup.

THIS PLAN DOES NOT COVER CONSEQUENTIAL DAMAGES. Manufacturer shall not be liable under any circumstances for any consequential damages, including loss of profit, additional labor cost, loss of refrigerant or food products, or injury to personnel or property caused by defective material or parts or for any delay in its performance hereunder due to causes beyond its control. The foregoing shall constitute the sole and exclusive remedy of any purchases and the sole and exclusive liability of Manufacturer in connection with this product.

The Warranties are Expressly in Lieu of All Other Warranties, Express of Implied and All Other Obligations or Liabilities on Our Part. The Obligation to Repair or Replace Parts or Components Judged to be Defective in Material or Workmanship States Our Entire Liability Whether Based on Tort, Contract or Warranty. We Neither Assume Nor Authorize Any Other Person to Assume for Us Any Other Liability in Connection with Our Product.

Warning

Maintenance & Case Care

When cleaning cases the following must be performed PRIOR to cleaning:

To avoid electrical shock, be sure all electric power is turned off before cleaning. In some installations, more than one switch may have to be turned off to completely de-energize the case.

Do not spray cleaning solution or water directly on fan motors or any electrical connections.

All lighting receptacles must be dried off prior to insertion and re-energizing the lighting circuit.

Please refer to the Use and Maintenance section of this installation manual.
