**IMPORTANT!!**

**KEEP FOR FUTURE REFERENCE**
General Information

This booklet contains information on:

**SMD-LT/SSD-LT SERIES**
Low Temperature, Service, Single Deck Gelato Cases with Spherical Front Lifting Glass

Shipping Information

**IMPORTANT!**  
FOR YOUR PROTECTION PLEASE READ AND OBSERVE THE FOLLOWING INSTRUCTIONS:

Transportation companies assume all liability from the time a shipment is received by them until the time it is delivered to the consumer. Our liability ceases at the time of shipment.

All shipments leaving our plant have been carefully inspected. If a shipment arrives with the crating or packaging damaged, have the carrier note the condition on the receipt. Check as soon as possible for concealed damage.

If it is found that the shipment has been damaged in transit, please DO NOT return it to us, but notify and file a claim with the carrier at once. **FAILURE TO FOLLOW THIS PROCEDURE WILL RESULT IN REFUSAL BY THE CARRIER TO HONOR ANY CLAIMS WITH A CONSEQUENT LOSS TO THE CONSUMER.**

If a UPS shipment has been damaged, retain the damaged material and the carton and notify us at once. WE will file a claim.

**GOODS SHOULD NOT BE RETURNED FOR CREDIT UNLESS AUTHORIZED BY OUR SALES DEPARTMENT.**

Case Drawings

![Case Drawings](image_url)
Installation Instructions

Location
This refrigerated display case has been designed for displaying and storing perishable food product. It is engineered for air-conditioned stores with a maximum ambient of 75°F and 50% relative humidity.

When selecting the location for placement of this case, avoid the following conditions:
Excessive air movement
• Doors
• Air-conditioned vents
• Other air sources

Excessive heat
• Windows
• Sun
• Flood lamps 8 feet or less from the product
• Other heat sources

Crate Removal
Move case as close as possible to its location. Remove all crating and shipping braces above the shipping pallet. Loosen the plastic dust cover from the pallet, but leave cover over the case to protect it while removing the case from the pallet. Carefully, lift case up and off the pallet. Remove dust cover. Installation hardware ships in an installation packet located inside the case. Note: Location of horizontal supports underneath of unit before removing from pallet, damage to the finished metal will occur if correct lift points are not identified prior to removal.

Leveling
To ensure proper operation of the refrigeration system and drainage of the condensate, the case MUST BE LEVEL. Use a carpenter level to level front to back and side to side. Shim as necessary.

Drain, Electrical and Refrigeration Connections on Remote Cases
NOTE: Barker remote units are shipped with a dry nitrogen charge of approximately 10 lbs. pressure in the evaporator coil. During installation if nitrogen charge is not present, leak check accordingly.

1. Drains are heated copper and located in the center of the case. Connect copper drains to existing floor drains. Provide as much downhill slope as possible and avoid long runs of drain lines. Do not install condensate drains in contact with non-insulated suction lines in order to prevent condensate from freezing. Install the 1” copper trap, which is provided with the case. All drains must be trapped.

2. Electrical connections are made through the power supply box of each case, which can be accessed by removing the back panel above the toe kick. The power supply is located in the raceway. Voltage requirements and component amperes can be found in the electrical section of this manual, but always check the data tag located on the exterior of the case. Case must be grounded.

3. Refrigeration connections will be made through the refrigeration stub up located on the customer left side of the case (see mechanical view pg 3). See refrigeration information section for case-load and recommended settings.

For proper refrigeration performance, PRODUCT MUST NOT BE PLACED IN A POSITION WHERE IT MAY AFFECT THE AIR CURTAIN. Air discharge and return air vents must remain unobstructed.

Case Exterior Loading
These cases are not designed for excessive external weight. DO NOT WALK ON THE TOP OF THE CASES. Walking on top of cases could cause personal injury and damage to the case.

Doors
Rear load doors are shipped inside the case. Push top of doors all the way into top door tracks. Push bottom of door over bottom door tracks and lower over tracks.
Glass Adjustment
Lift Glass is installed at the factory with the case perfectly level, if adjustments need to be made to align the glass first check to insure the case was properly leveled during installation. 
NOTE: This is a 2-person operation. One person must hold the glass at all times.

1. Lift the glass to its highest position as shown in drawing to the right.
2. Loosen allen screws. (See profile below.)
3. Starting at the right side, tap the wedge with a #2 standard screwdriver. Repeat procedure on the left side. Continue working right to left until the wedge recesses into the aluminum extrusion. 
   EXTREME CARE MUST BE TAKEN NOT TO TAP THE WEDGE TOO HARD.
4. Slide the glass right or left as needed.
5. Tighten the right allen screw while holding the left side of the glass firmly. Be careful to keep the glass level.
6. Tighten the remaining allen screws.
7. Lower glass into position. Repeat as necessary until glass is completely level.

NOTE: the entire glass clamp and glass can be moved sideways by loosening the allen screws that are located in the glass clamp hinges.

Installation Checklist
Before supplying electrical power and starting case check the following:
1. Evaporator Area.
   Check to ensure evaporator fan pressure plates are secure and in proper position. 
   NOTE: Hinged portion of pressure plates are secured for shipping with mounting screws. Screws do not have to be removed for case operation but must be removed to use hinge.
2. Lighting System
   Check to ensure male plugs are completely inserted in female sockets and that all lamps are securely seated in light fixture.
3. Case Leveling
   Visually check case. If lift glass is out of adjustment or case looks out of square, use a carpenter's level and shim as needed.

After supplying power to the case and starting unit:
1. Check to ensure all fans are operational.
2. Check all lights.
3. Check case temperature and adjust CPC controller as needed. See refrigeration section of this manual for case settings.

NOTE: Glass is heated to eliminate condensation. Power to heated glass runs continuously. Glass heater wires must be disconnected if glass removal is required. With glass in the up position, disconnect wires at the upper left hand corner.
Refrigeration Information

**Case Operation**

**Refrigeration**

A dedicated refrigeration circuit and EPR valve are required for proper case operation. The EPR valve can be supplied with the case if requested, or field supplied. It MUST be adjusted in the field for proper temperature at start up. Please refer to the pressure/temperature chart to obtain proper pressure for refrigerant on site. The expansion valve superheat must be field set to 4° degrees. This case should NOT be controlled by the refrigeration rack controller, all control of case by CPC controller.

<table>
<thead>

<th>Temperature</th>
<th>Pressure PSIG</th>
</tr>
</thead>
<tbody>
<tr>
<td>R404a</td>
<td>-10°F</td>
<td>23.6</td>
</tr>
<tr>
<td>R507a</td>
<td>-10°F</td>
<td>25.5</td>
</tr>
<tr>
<td>R402a</td>
<td>-10°F</td>
<td>26.3</td>
</tr>
</tbody>
</table>

Refer to pressure temperature chart for other refrigerants not listed.

If the gelato case must be piped with another case, the following must be done for proper operation of the gelato case.

1. Suction stop solenoid, liquid line solenoid on the other case, at case.
2. Separate defrost control for other case. (Defrost control for gelato case by CPC controller at gelato case.)
3. EPR at gelato case, adjustment as required.
4. EPR at other case, adjustment as required.

The refrigeration and defrost cycles for this case are controlled with a CPC controller. The case is in refrigeration mode until the cut-out point (CSP) is reached. The case controller relay then opens, cutting power to the liquid line solenoid. Upon temperature rise in the case, the case controller relay closes. This restores power to the liquid line solenoid, and resumes the refrigeration cycle.

For proper refrigeration performance, PRODUCT MUST NOT BE PLACE WHERE IT WILL AFFECT THE AIR CURTAIN.

**Defrost**

This case is equipped with an electric defrost system. The CPC controller initiates defrost, cutting power to the liquid line solenoid. The defrost time is programmed for 45 minutes or defrost will terminate at a 40°F. There are 3 defrosts programmed per day. Upon defrost termination, there is a factory programmed “drip” time of 2 minutes. During this period, there is no power to the defrost heaters, liquid line solenoid, or to the evaporator fan motor.

At the end of the “drip” time, power is restored to the liquid line solenoid, restoring refrigeration. The evaporator fan motor (klixon controlled) resumes operation when the klixon senses 20°F. After the drip period, the controller will read “PULL”, which indicates the temperature “PULLDOWN” after defrost. The controller will revert to displaying temperature at the end of the “PULLDOWN” period. NOTE: The evaporator fans cycle off during defrost, they are controlled by a klixon.

**Case Controller Instructions**

Main controller located in the electrical raceway on customer right.

- Press Alarm button
  [Temporarily deactivates alarm]
- Press and hold Set button until CSP appears on display.

The remote control is easily accessed on the customer left, outside back. It is located below back ledge.
**Temperature Set Point [CSP]**
1. Press Set [Set point appears]
2. Use up or down arrows to change set point.
3. Press Set, press Down arrow.

**Defrost Termination Temperature [dEFt]**
1. Press Set, defrost termination temperature appears.
2. Use Up or Down arrows to change.
3. Press Set, press Down arrow.

**Duration [dEFd]**
1. Press Set [Set point appears]
2. Use Up or Down arrows to change.
3. Press Set, press Down arrow.

**Defrost on Start Up [dUPU]**
1. Press Set [Set point appears]
2. Do not change from NO
3. Press Set, press Down arrow.

**Drip Time [drip]**
1. Press Set [Set point appears]
2. Do not change from 10
   (unless local conditions allow)
3. Press Set, press Down arrow.

**Defrost cycles per day [dCPd]**
1. Press Set [set point appears]
2. Press Up or Down arrows to change.
3. Press Set, press Down arrow.

**High temperature alarm [tAH]**
1. Press Set [set point appears]
2. Press Up or Down arrows to change
3. Press Set, press Down arrow.

**Low temperature alarm set point [tAL]**
1. Press Set [set point appears]
2. Press Up or Down arrows to change.
3. Press Set, press Down arrow.

**Alarm delay after defrost [Adtd]**
1. Press Set [set point appears]
2. Press Up or Down arrow to change.

**Alarm delay for high/ low alarm [AdEL]**
1. Press Set, press Up or Down arrow to change.
2. Press Set and hold for 5 sec.

Program complete.

**Manual Defrost**
- Press and hold Set button for 10 sec.
  [until dEF appears]

**Alarm**
- To remove alarm signal press and hold Alarm button.

Gelato will vary based on initial mix/recipe. The CPC controller factory programmed settings may not be appropriate for all mix/recipes. Adjustments may be required in the field of the CPC, Drip time, defrosts per day, based on local conditions. These field adjustments may also include the EPR valve.

**Factory Settings**
*(5-10° PRODUCT TEMPERATURE)*
- Temperature set point [CSP] -10
- Defrost termination [dEFt] 40°
- Defrost duration [dEFd] 45 min
- Defrost on power up [dUPU] NO
- Drip Time [drip] 2 min
- Defrost cycle per day [dCPd] 3
- Temperature alarm High [tAH] 35
- Temperature alarm low [tAL] -20
- Alarm delay after defrost [Adtd] 60
- Alarm delay high/low [AdEL] 60
CL-RSC Onboard Outputs

If using CL-RSC without an expansion board, wire the outputs to the two-wire terminals on the right side of the control unit, as shown in Figure 6. Each of these output points are rated to a maximum of 3A @ 250V.

For loads greater than 3A, use the outputs to energize external relays for compressors, defrost, and other functions.

Expansion Board

The relay output board connects to the Control Link main module using an 8-pin ribbon cable. Plug the cable onto the Expansion Board connector at the bottom of the main module.

Defrost, Fans, and Aux Relay

Using splice jugs, connect the defrost heater(s), case fans, and auxiliary output (either case fans or an alarm device) to the three relays on the left side of the relay output board as shown in Figure 6.

Compressor Relays

The Control Link uses two relays on the output board to control the compressor. Line voltage must be connected to the Line 1 and Line 2 connectors on relays 1 and 2, respectively. The Load 1 and Load 2 connectors are wired to the compressor. Figure 7 shows the wiring diagram.

Pressure Switch Wiring

If desired, a pressure switch may be used to deactivate the compressor at a high/low suction pressure condition occurs. Remove the jumper wire and connect this switch to the dual screw terminal Pressure Switch connector located in the middle of the relay output board. See Figure 8. If not used, these terminals must be jumpered in order for the board to work.

The pressure switch used is normally open (NC) type.

CL-RSC Operation

The Display

The primary means of interaction with the CL-RSC system during programming and operation will be the display on the front of the Control Link module (if the remote display is not being used).

Seven Segment Display

The four-digit seven-segment display is the primary means a technician or operator will use for viewing temperatures and alarm codes, and programming setpoints.

Status LEDs

The three LEDs above the seven-segment display show the status of the compressor relay, the fan relay, and whether or not a setpoint shift is active (Lit if setpoint shift is active).

Buttons

The four buttons to the right of the seven-segment display are used to program the CL-RSC, select temperatures and alarms for viewing, and perform other functions such as alarm silencing and manual defrost.

Modes of Operation

Start-Up

Compressor operation will be suspended after power-up based on the values of the EOM parameter (default 10 minutes). After this delay, the CL-RSC reverts to normal refrigeration control. To prevent nuisance alarms when the case is first started up, no high temperature case alarms will be generated until 170 minutes after the start of the first cooling cycle.

Normal Operation (Refrigeration)

When in refrigeration mode, the CL-RSC controls the compressor relay when the case temperature is above the setpoint, and de-energizes it when

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
Control Link Refrigeration System Controller Installation Instructions

3. The current value of this parameter will be displayed. Use the arrow keys to change the value.
4. Press (SET) to accept value.
5. Repeat steps 1 - 4 until all set points have been properly configured.
6. When finished, press (SET) again for five seconds to save changes and exit. The display will blank for one second and then revert to normal display if the save was unsuccessful.
7. To cancel all changes, press and hold (SILENCE) for five seconds, or leave controller idle for 60 seconds. You will lose all setpoint changes made since you entered general programming mode.

**WARNING:** You MUST press and hold (SET) after changing setpoints if you want your changes to be permanent. Leaving the controller idle for 60 seconds will log you out and cancel all your setpoint changes.

**NOTE:** Parameters in General Parameters shaded gray are only shown if the real time clock module is being used.

</tr>
<tr>
<td>$W_{DL}$</td>
<td>Alarm delay for high/low temp alarm. Temp must remain below alarm setpoint range for this number of minutes before an alarm can occur.</td>
<td>0</td>
<td>60</td>
</tr>
</tbody>
</table>

Table 1. General Parameters

*General Parameters are used by technicians and operators to set control setpoints, defrost schedules, time and date.*

**Before changing parameters, clear any active alarms by pressing the Alarm Silence button. Press (SET) and hold for five seconds. If general mode programming has been password protected, you will see PASS on the display. Press (SET) and use the arrow keys to increment the password number until the correct password is shown, and then press (SET).** (If general parameters are not password protected, PASS will not appear on the display.)

The display will show the first programmable parameter: $C_{SP}$ (case temperature set point). The arrow keys may be used to scroll through the list of general parameters. To change the value of any parameter:

1. Select the parameter using the arrow keys (until the code is shown).
2. Press (SET).
Ballast Information

Ballasts are located in the electric raceway at the rear of the case.

NOTE: Case must be grounded
Maintenance Information

Cleaning

Case Exterior
Clean surfaces frequently with warm water and mild detergent. Do not use strong alkali solutions, steel wool, or abrasive cleaners.

Non-Glare Glass
Non-glare glass surfaces are coated to reduce the glare from lighting. Care must be taken not to scratch the coating. Use the following products only.

Cleaning Cloths
Scotch-Brite® High Performance Cloth - manufactured by 3M® and available in most grocery stores under the name Scotch-Brite® Microfiber Cleaning Cloth in a 12" x 14" size. This cloth is washable and may be reused as long as it remains clean.
Spontex® Microfibre Cleaning Cloth - distributed by Spontex® and available in most grocery stores under the same name in a 15.75" x 12" size. This cloth is washable and may be reused as long as it remains clean.

The cleaning cloths named above will normally remove dust, grease, oil and fingerprints without the need for cleaning fluids. A light spray of the cleaning fluids listed below will reduce the time required for cleaning.

Cleaning Fluid - for more difficult cleaning jobs, these products are recommended:
- Windex® - standard product only (extra-strength or specialty products may not be suitable)
- Glass-Plus® - standard product only (extra-strength or specialty products may not be suitable)

Warm Water
DO NOT USE the following types of materials for cleaning glass with anti-reflective coatings.
- Coarse Paper Towels
- Scouring Pads or Powders
- Steel wool or Steel Fiber Materials
- Blades
- Acidic or highly Alkaline detergents
- Fluorine based detergents

Evaporator Coil
Clean as needed.

Light Replacement
The fluorescent lights in this case are furnished with plastic safety shields and end caps. When replacing fluorescent lamps, be certain to reinstall safety shield and caps. (See Illustration). If the bulb is not fully seated the lights will not operate. BE SURE BULBS ARE FULLY SEATED.
The light switch is mounted to the right side of the ceiling. See mechanical drawing for ballast box location.

A. To remove bulb, grasp lamp holder on either end of the bulb and with equal pressure pull down.
B. Install new bulb into the plastic safety tube protector. Insert bulb into and cap.
C. Position the bulb and cap under the lamp holder and with even pressure press the bulb into the light fixture.

Caution: Failure to install bulb fully into light socket will cause premature bulb life and may cause damage to light fixture.

Case Interior
All pans and the deck can be removed for cleaning. Check to make sure the case drain(s) are not clogged. Clean interior with warm water and a mild detergent. A sanitizer should be used after washing to eliminate bacteria. Rinse thoroughly being careful not to flood drain system. Avoid spraying water directly into electrical connections. DO NOT USE A HIGH PRESSURE WATER HOSE. MAKE SURE FANS ARE SHUT OFF WHEN CLEANING THE INTERIOR OF THE CASE. Drains should be cleaned once a month.

(319) 293-3777

Parts
Ordering Procedure
1. Contact the Service Parts Department
   Melissa Marshall
   703 Franklin Street
   PO Box 478
   Keosauqua, IA 52565
   Tel: 319-293-8323
   Fax: 319-293-8377
   melissa.marshall@hillphoenix.com

2. Provide the serial number of the case containing the part.
   To locate the serial number look on the data tag located on the customer left, outside back of the case, the customer left, inside top of the case, or contact the factory for location.

3. If parts are to be returned for credit, contact the Parts Department. Do not send parts without authorization.

BEFORE SERVICING
ALWAYS DISCONNECT ELECTRICAL POWER AT THE MAIN DISCONNECT WHEN SERVICING OR REPLACING ANY ELECTRICAL COMPONENT.
FOURTEEN MONTH WARRANTY. MANUFACTURER’S PRODUCT IS WARRANTED TO FREE FROM DEFECTS IN MATERIAL AND WORKMANSHIP UNDER NORMAL USE AND MAINTENANCE FOR A PERIOD OF FOURTEEN MONTHS FROM THE DATE OF ORIGINAL SHIPMENT. A NEW OR REBUILT PART TO REPLACE ANY DEFECTIVE PART WILL BE PROVIDED WITHOUT CHARGE. PROVIDED THE DEFECTIVE PART IS RETURNED TO MANUFACTURER. THE REPLACEMENT PART ASSUMES THE UNUSED PORTION OF THE WARRANTY.

WARRANTY CLAIMS: All claims should include: the serial number of the cabinet, proof of purchase, date of installation, and all pertinent information supporting the existence of the alleged defect. Any action for breach of these warranty provisions must be commenced within one (1) year after that cause of action has accrued.

All warranty service work must be pre-authorized by Barker Specialty Products (800-814-0446). Barker Specialty Products reserves the rights to designate the service provider, time in which labor is to be performed and specify amount of time per warranty problem.

This warranty does not include labor or other costs incurred for repairing, removing, installing, shipping, servicing or handling of either defective parts or replacement parts.

The fourteen month warranty shall not apply:

1. To any unit or any part thereof which has been subject to accident, alteration, negligence, misuse or abuse, operation on improper voltage, or which has not been operated in accordance with the manufacturer’s recommendation, or if the serial number of the unit has been altered, defaced, or removed.

2. When the unit, or any part thereof, is damaged by fire, flood, or other act of God.

3. Outside the continental United States.

4. To labor cost for replacement parts, or for freight, shipping expenses, sales tax or upgrading.

5. When the operation is impaired due to improper installation

6. When installation and startup forms are not properly complete or returned within two weeks after startup.

THIS PLAN DOES NOT COVER CONSEQUENTIAL DAMAGES. Manufacturer shall not be liable under any circumstances for any consequential damages, including loss of profit, additional labor cost, loss of any delay in its performance hereunder due to causes beyond its control. The foregoing shall constitute the sole and exclusive remedy of any purchases and the sole and exclusive liability of Manufacturer in connection with this product.

The Warranties are Expressly in Lieu of All Other Warranties, Express of Implied and All Other Obligations or Liabilities on Our Part. The Obligation to Repair or Replace Parts or Components Judged to be Defective in Material or Workmanship States Our Entire Liability Whether Based on Tort, Contract or Warranty. We Neither Assume Nor Authorize any Other Person to Assume for Us Any Other Liability in connection with Our Product.

Mail approved warranty claims to the address listed below:
